Poughkeepsie, New York

1. Re: C28-6235-2
Figure 20-7, p. 44. Should the first line not read
.STO OPSYN STO?
2. I have not succeeded in writing a similar trap for TRA
that will not produce error flags with TRA*. How should
this be handled? (Preferably redefine both TRA and TRA*.)
Can they be redefined separately (without testing the F bits
by program)?
